

COVID-19 Homeless Response Framework

Known:

- Homeless shelters have already implemented or will be practicing reverse isolations for the medically vulnerable already within their shelters.
- There are 177 known individuals on the street who are medically vulnerable. These individuals can be placed in isolated congregate living.
- Individuals who have been exposed with a positive case and/or have been tested with results pending need to be isolated/put in place that has the capacity for self-quarantine.
- Individuals who are infected but medically stable need to be isolated but can be in congregated living with others who are also infected but medically stable.
- Individuals who test positive/are infected who are medically unstable need to be isolated at a hospital to receive needed medical care.

Framework (Agreed upon):

- Individuals who test positive/are infected who are medically unstable will be isolated at a hospital to receive needed medical care.
- Top 20 most medically vulnerable on the street to receive hotel vouchers- ****Is this Sustainable for the entire time Jacksonville is experiencing positive cases?**

Framework (Suggested Options):

- Infected Medically Stable > placed in isolated congregate living at a community center
- Medically Vulnerable > placed in isolated congregate living at a community center
- Exposed/Test Pending > Dawn Gilman looking at what other cities doing (ex. RVs) to see about the feasibility of replicating the model in Jacksonville
- Exposed/Test Pending > placed in isolation/self-quarantine at Hotels/Motels
